Vogelsang Fastener Solutions

Harnessing the Power of Technology for Customized Industrial Fasteners

Dale Stuban,
 Managing Director

Vogelsang Fastener Solutions (VFS) is part of Mecanindus-Vogelsang-Group, a leading manufacturer of standard and custom metal-formed parts and tubular-engineered fasteners. Its ethics and strong dedication to caring for customers and creating lasting relationships are backed by robust manufacturing competencies to cost-effectively design metric and fractional products.

What sets VFS apart is its family ethos in business. The Group is privately owned by the management and known for delivering impeccable customer service. This exemplifies the core tenet of prioritizing client satisfaction over profit.

“I believe the way you mitigate disruptions always leaves a lasting impact on a customer, who will, from that point, remember you as the partner that dealt with their problem the best,” says Dale Stuban, Managing Director of Vogelsang Fastener Solutions.

VFS’s technological prowess perfects its standard and customized product lines. For instance, the company uses metal

wrapping technology, progressive tool technology, and mandrel implementations to form accurately shaped and concentric products.

Other proprietary solutions contributing to its product development competencies include robust manufacturing, stamping, and transfer tools (handling 5 to 400 tons). It uses multi-slide technology, in-house shear testing, coordinate-measure machines (CMM), and various robotic technologies to assure impeccable quality and safety throughout the production cycle. A recent addition to this list is Hedtmann’s inspection equipment, which offers 100 per cent accuracy in tool specifications to avoid product rejection risks from automotive industry clients.

Combining modern machinery with classic engineering capabilities, superior precision testing, inventiveness, and dedicated teams of employees, VFS delivers consistently high-quality products. It brings everything, from product development to large-scale manufacturing, under one roof through close collaboration with long-term partners and service providers.

Although it has a wide range of standardized products, VFS never persuades clients to limit their needs and choose off-the-shelf products. Instead, it engineers products that fit their specifics. Choosing to tailor solutions instead of mass-selling in-stock products is at the heart of its success.

Over a dozen customers readily switched to VFS because they wanted to stop fitting into supplier standards. These customers stayed over the long haul because the company went beyond product customizability and complemented their decision-making with expedited

production time, phenomenal customer service, and reasonable pricing.

Another key differentiator is VFS’ assurance to deliver products at shorter lead times. It achieves this through a stock program for quick shipping. It leverages state-of-the-art transportation methods like air shipping, which saves up to four weeks of lead time, and drop-shipping—eliminating the need for maintaining physical inventory.

I believe the way you mitigate disruptions always leaves a lasting impact on a customer, who will, from that point, remember you as the partner that dealt with their problem the best

Having a manufacturing industry presence of over 100 years and a clientele comprising over 2,500 businesses, VFS has ignited numerous success stories. In one instance, a customer required a large diameter pin within a tight timeframe. For this project, the company cut down a longer pin, deburred it, and shipped the product on the same day, with additional pins flown in from its manufacturing site at Hagen, Germany. Ultimately, VFS received, reworked, and shipped the desired volume of products within a week.

Currently, VFS has manufacturing facilities in the U.S., Czechia, France, and China, where it remains the only producer of roll pins, coil pins, and tension bushing. Through high-quality products using superior technologies and solid client partnerships creating a lasting impact, VFS is a go-to player in the metal parts manufacturing industry.
